

Ovakil Changes list

- 1.** Nothing opens when we click any presented options in document drafting page
- 2.** Book appointment button not working in legal drafting services
- 3.** Request for opinion not working in second opinion page
- 4.** In knowledge bank topics section in backend, when we try to create a new topic, the featured media option is all greyed out, we can't select anything in it, and when we go to media attachments to attach a pdf we can only select single language in a pdf but then we will have to add single pdf for 3 times so there should be multiple selections for language in a pdf in knowledge bank topic's pdf attachment
- 5.** Course topics doesn't open even with subscription and even if we have subscription and we tap subscribe now button it doesn't open anything just a warning pops up like please select a plan
- 6.** In knowledge bank when we search something in a course then recommendations do pop up correctly but the title font color is as same as the background so we can't see the title unless we hover the cursor over it
- 7.** Where do we see the contact us msg in the back end?
- 8.** Where can we see, add or edit things in lawyer's article page?
- 9.** In legal drafting page, at the very bottom, the layout of page switching button is like not quite good, like the fonts are offcentered
- 10.** In legal drafting page, at the very bottom, the layout of page switching button is like not quite good, like the fonts are offcentered
- 11.** The moving animation on home screen, how will we put something on it and how will we edit it
- 12.** In the shop page in quick links, change "all categories" button to "more products" or "view all products" with and arrow and change it's position from top left to top right
- 13.** Magnifying glass option missing in same page's search bar, it's looking like a blank box
- 14.** Legal case option in quick links, how can we add case categories in register new case's case category option

- 15.** If we are gonna redirect all the products to one click malls then why do we need cart option in this one?
- 16.** Why don't we have a page to show subscription plans? Like what plans what are there and are the benefits we are gonna get with them
- 17.** Why do we need the search bar in quick access bar
- 18.** Change the mobile number in quick access and add mobile number same as contact us page
- 19.** Now on the latest law updates page, first I am gonna mention all the minor changes according to pc view, the sliding button for categories is offcentered and doesn't have any arrow mark on it, then at the bottom of the page the font for next and previous page switching buttons is like going out of the circle and font is offcentered for all the buttons, now one major thing that I want to ask is like why do we need to display topics as same as articles in this page? Like can't we do something else with topics like we should not see any topic here only articles then when a consumer selects a specific topic then it filters out the specific articles of that topic or something like that, I just know that we don't need topics out and as same as articles cause we can add data in topic and in article both then what is the point of article if we can add data in both of them, I know it's confusing and I guess it was requested from Dharmendra sir few months ago but when I talked to Dharmendra sir about it few days ago then he agreed and said we don't need topics out here but he said to let it go for now, so now when we are at the very end so now I guess it's the right time to discuss it
- 20.** Now in the backend of latest update articles, in article editor in master native tab, it's not working properly like everything is shifted to left on my screen like it's not proper
- 21.** What is the point of featured slide deck option in multimedia in latest update articles when it just looks like a normal pdf in front end? Like what is the point of it being featured
- 22.** Have to change the pdf viewer, like we want the normal viewer in which we have to scroll through pages, not the one we have, in which we have to tap next everytime we have to change the page.
